DRAFT for founder sign-off. Management figures, not audited. Goods only basis. Figures labelled verified, modelled, or target. The borrowing entity and security are being finalised through a current legal review (noted on page 3). Not a commitment of capital or a finalised facility.

Catalytic finance to bring Stretch Bed production On Country.

Goods is a social enterprise delivering quality, washable, flat packable furniture to remote Indigenous communities across Australia. The flagship **Stretch Bed** is made from recycled HDPE plastic, galvanised steel and heavy duty Australian canvas, built for remote conditions. We are raising blended catalytic capital to move production from bought in kits toward a community ownable manufacturing line, On Country.

THE ASK

AU$300,000 repayable facility, as the anchor of a ~AU$475,000 blended capital stack

SEFA is the keystone. A signed SEFA facility is structured to help unlock a **contingent philanthropic catalytic match** (terms being confirmed in writing). It is the single commitment the whole raise turns on, and the longest pole: a first time, logistics heavy borrower runs a 2 to 4 month credit assessment, so we are opening this now.

INSTRUMENT	PURPOSE	SIGNED TODAY	WINDOW
Repayable term & rate to SEFA assessment	On Country production scale up	AU$0 this is the gate	Before 31 Aug first match eligible LOI

Why SEFA is the right lender

- ✓ Goods sits squarely inside both of SEFA's named impact streams: Aboriginal Community Enterprises and Community Environment Enterprises. A recycled plastic bed built with and for remote First Nations communities is the intersection of the two.
- ✓ No First Nations ownership gate. SEFA lends to social enterprise companies and to charities on the strength of the enterprise. The entity ownership question that gates other Indigenous lenders is not a barrier here, which is precisely why SEFA is the anchor.
- ✓ Mission alignment runs to SEFA's own ownership: the NSW Aboriginal Land Council is SEFA's majority shareholder. A loan into On Country production advances a shared agenda, not just a balance sheet.
- ✓ The ask sits cleanly inside SEFA's AU$200K to AU$5M band, above the floor, at a size a first facility can carry.

Proven in country

496	9	$713,827	20kg
beds deployed across Australia	**communities** served	**revenue**, Goods only management, not audited	HDPE diverted **per bed** design spec, modelled

The Stretch Bed, the only direct sale product

Recycled HDPE X trestle legs, two galvanised steel poles, heavy duty canvas. **200kg capacity, ~5 minute no tools assembly, a 10 plus year design life.** One clear unit, a real price of **AU$750**, sold direct and through partners with per bed records.

The move this capital funds

Today Goods buys bed kits in. This facility stands up an **On Country production line:** collect plastic, shred, press, build the bed components in community. It lowers the cost of every bed and builds an asset a community can ultimately own and operate.

Unit economics: the capital buys a structural cost down

PER BED	BUY KIT (TODAY)	IN SOURCE (FACTORY)	ON COUNTRY (SCALE)
Sale price	$750	**$750**	$750
Marginal cost / bed	$684.79	**$425.74**	$415.74
Contribution / bed	$65	**$324**	$334
Annual fixed block	$109,500	**$109,500–163,500**	$133,500
Breakeven (beds / yr)	1,679	**338**	399

Cost model v6, computed 27 June 2026 (modelled). Bed level bill of materials is largely verified; facility and site capex is modelled pending three vendor quotes. Sale price AU$750 verified.

THE INVESTMENT CASE IN ONE LINE

Capital moves Goods from buying kits at ~$685 per bed to in sourcing at ~$426 per bed, a **~$260 per bed structural cost down**, while building a production asset communities can own.

How the loan is repaid

- **The cost down is itself the repayment engine.** Each in sourced bed contributes ~$324 against price, versus ~$65 on a bought in kit today. On the volume Goods already moves, and as it grows, that ~$260 per bed improvement converts demand into serviceable cash.
- **Contribution above breakeven services the facility.** Past the in source breakeven (338 to 399 beds per year), every additional bed throws off ~$324 to ~$334 toward fixed costs, then debt service.
- **The catalytic match de risks the principal.** The SEFA facility is structured to draw matched philanthropic capital in behind it (contingent, terms being confirmed), reducing the net capital that must be repaid from trading.
- **A detailed three year cash flow forecast and a workbook reconciled to the books are in preparation** for SEFA's credit team. Final term and rate are for SEFA's assessment.

Security

- **Plant and equipment** funded by this facility (the production line) is the primary asset security.
- **Trade receivables** (~AU$143,000, stated separately from recognised revenue) support a working capital position.
- **No real property** is held. We are open to a **philanthropic guarantee enhancement** to de risk a senior position if useful to SEFA.

Use of funds (illustrative, tied to the cost model)

On Country production facility, equipment and container build	majority
50 bed in source production run, proves the line	~$21K + setup
Fixed block runway, production, facility, field	~$133.5K / yr
Contingency	confirm %

Final use of funds confirmed against three vendor quotes and the accountant. The capital plan is quoted, not estimated, before signing.

The full capital stack (target, nothing signed yet)

SOURCE	TARGET	TYPE	STATUS
SEFA (this ask)	**$300K**	**Repayable**	**Opening now**
Snow Foundation	$100K	Repayable	In discussion
Centrecorp	$75K	Grant	In discussion
Signed external subtotal	**$475K**		**$0 signed**
Philanthropic match	contingent	Catalytic	Terms being confirmed

The mechanic: signed external capital is structured to unlock the contingent philanthropic match. Nothing converts until the first signed, match eligible commitment lands. Match ratio, eligibility and cap are being confirmed with the funder in writing.

The risks we name ourselves

Founder led today with no funded staff; the raise funds a 12 month role map. The contracting entity and a First Nations ownership pathway are in a legal review concluding around end July 2026. Single product concentration around the Stretch Bed. Facility capex is modelled pending three vendor quotes. **Naming these up front is the honest position, and each maps to a mitigation we can walk through.**

What we are asking SEFA, and the next step

An exploratory credit conversation, opened now against the 31 August match window. We will confirm together: minimum loan size and that AU$300K to AU$400K is in band; appetite for remote NT and WA logistics heavy recycled plastic manufacturing; a realistic application to signed facility timeline for a first time borrower; and indicative rate and security. We arrive with the signed AU$713,827 Goods only revenue figure, the 496 bed record, the cost model, and a cash flow forecast in preparation.
