

GOODS ON COUNTRY

From waste to ownership.

Durable beds and washing machines, made from local plastic, designed and built with remote communities, and moving into their hands.

WASTE → PRODUCT → SKILL → WORK → **OWNERSHIP**

Goods on Country

THE WHY

A bed is health hardware, not furniture.

Aboriginal people carry among the highest rates of rheumatic heart disease in the world. We build the conditions that sit **upstream** of it. We never claim to cure it.

THE PROBLEM

\$3M

of washing machines are sold into remote communities near Alice Springs every year. Most are dumped within months.

Remote homes pay double for goods that die in months. **59%** have no washing machine at all.

THE PRODUCT

The Stretch Bed

26 kg

one person carries it

200 kg

load it holds

~5 min

to build, no tools

10 yr

design life

Recycled-plastic legs, steel poles, washable canvas. Designed in community. Washable, repairable, and made on Country.

Goods on Country

HOW IT'S MADE

Local waste becomes a bed.

20 kg of plastic diverted per bed ● M modelled

THE MODEL

The making moves on Country.

Community designs it, builds it, and over time owns the making. **Our goal is to become unnecessary.**

Goods on Country

PROOF

Already shipped, and every one is trackable.

133 Stretch flagship + 363 Basket legacy. Every bed carries a QR digital twin: GPS, recipient, delivery date. Click any one.

Goods on Country

THE IMPACT

Every bed carries a fixed impact payload.

We label every number **verified**, **modelled**, or **target**. We never overclaim. That honesty is the impact.

Goods on Country

Fair wages cost the model nothing.

Community production paying a fair wage lands about **\$5 a bed below** a factory. There is no trade-off between viable economics and paying people properly.

\$420.74community path

\$425.74factory path

● M modelled

One signed round seeds a fleet that funds itself.

Then each container transfers to a community corporation with its self-feeding loop. What compounds is not Goods revenue. It is **community-owned productive capacity**.

THE ASK

AU\$400,000, matched one to one.

Through QBE Catalysing Impact, matched by signed commitments. Signed letters by **31 August 2026**. About \$800,000 working once matched.

WHAT IT BUYS: THE BRIDGE

A 50-bed run in our own plant
cost: modelled → measured

The first ownership pathway
with Oonchiumpa

The enterprise-support layer
orders, wages, quality, cash

Plant capital
the first containers

Ordinary capital will not fund this stage. The return we are building is the transfer itself: the asset, the jobs and the decisions moving to community.
