

Idiot index: where the cost-down is

Index = what we pay now / raw-material floor. A high bar is not waste; it is supplier margin we could capture by in-sourcing.

HDPE legs

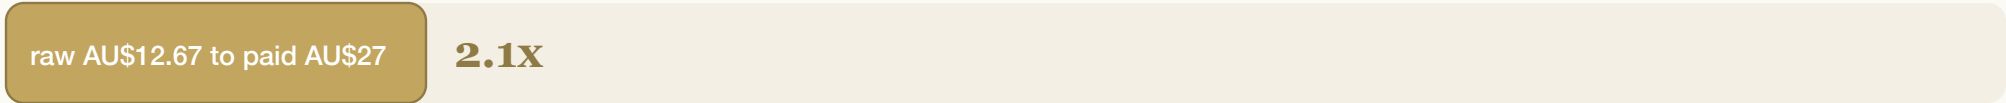

Defy panels

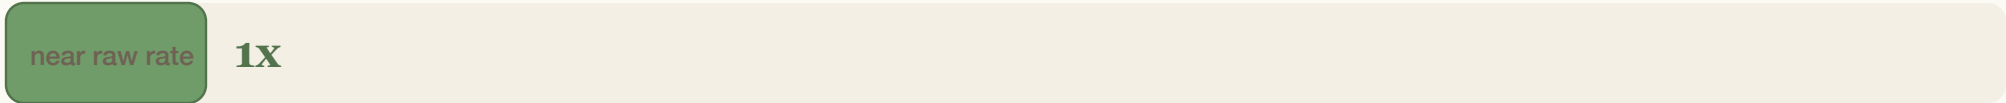

Canvas

Steel

Hardware

THE CAPITAL CASE

HDPE legs = the capital case: 8.6x vs the shred price, ~21.5x vs raw polymer — ~AU\$289/bed of supplier margin to capture

(in-house legs ~AU\$150/bed). Defy panels at 10x are the trap: you pay the press margin and still CNC and assemble.

Source: Goods cost model (2026-05). Index = paid / floor per component; HDPE legs shown vs two floors — Defy shred price (AU\$40) and raw recycled-HDPE polymer (20kg x AU\$0.80/kg = AU\$16, Envirobank). Modelled on verified BOM inputs.
