process (not a part):

Assembly / handling labour

\$65.00

Long-haul freight to community

\$150.00

Tension pulls the poles into the leg holes — the canvas is structural and braces the frame. No tools.

Parts subtotal \$469.79 + assembly \$65 + freight \$150 = marginal cost today \$684.79 · sells for \$750

20kg of recycled HDPE diverted from landfill per bed. The legs are two crossed-plank X-trestles; the poles thread through the canvas sleeves and the leg top-holes.

Source: Goods cost model v6 (2026-06). BOM + \$750 verified; in-house legs, labour, freight modelled. Idiot index = price paid $\div$ raw-material floor.
