

The circular life of 20 kg of plastic

Community waste becomes a bed, the bed stays in community, and more waste re-enters the loop — at 500 beds a year that is 10 tonnes of HDPE kept out of landfill.

THE PLASTIC LOOP

The loop closes
beds stay in community · the plant can move to community ownership

20 kg of HDPE diverted from landfill, every bed

10 tonnes kept out of landfill each year at 500 beds

8.6× idiot index — \$344 finished leg kit vs ~\$40 raw shred: the legs are the whole capital case

Source: Goods cost model v6 (2026-06). 20 kg recycled HDPE per bed and \$750 price verified; per-bed leg economics, in-house press throughput and 500-bed annual volume are modelled targets, not commitments.
