

# What a bed actually costs

The same total, two ways. The headline divides a fixed annual block over a tiny denominator. Split honestly, the next bed costs *for* less.

## THE TWO LEVERS

**Marginal drops AU\$685 to AU\$426 once in-sourced. Breakeven: Factory ~338/yr vs Buy-Kit ~1,679/yr.**

Source: Goods cost model (2026-05). AU\$1,780 = marginal + AU\$109,500 annual fixed block absorbed over a 100-bed denominator; split and breakevens modelled on verified BOM inputs (AU\$750 price).
