

How beds become community enterprise

Community sleeping on durable, fit-for-purpose beds, building the products, and earning inside community-run enterprises.

The problem

Families in remote communities sleep on floors because a bed cannot be bought locally and freight costs more than the bed. Scabies, and the path it runs to rheumatic heart disease, is why the bed is washable and off the ground. We claim no health outcome.

What goes in

Grants buy beds, 133 at a time at \$750, with freight and community work inside the price. QBE's \$300,000 builds two community production facilities. A \$150,000 loan carries the first year of running the organisation.

What happens

What changes, and how we count it

MEASURE	TODAY	THIS YEAR
Beds paid for, and enterprises trading	320 beds and 11 washing machines paid for, \$273,966 including GST. VERIFIED	400 beds as community stock, four organisations selling. TARGET
Paid hours of making	2,080 hours by Goods staff over six months. ESTIMATE	800 paid hours a year for 400 beds at two hours a bed. MODELLED
Plastic kept out of landfill	3,540 kg design mass in 177 Stretch Beds. Weighed: 0 kg. MODELLED	8 tonnes for 400 beds at 20 kg a bed. MODELLED
Beds in homes, and follow-ups done	540 beds in homes across 11 communities. Follow-ups done: 0. VERIFIED	50 beds followed up at delivery, six weeks and three months. TARGET

What has to be true

A facility goes only where a community has asked in its own words, beds are already there and somebody local wants to run it. Six months into a site we ask four questions, each a yes or a no: who holds the keys; who runs the payroll; who invoices the buyer; is at least half the production local. Ownership of the making is a pathway, and we do not claim it has moved until the answers are yes. Nothing in the raise is signed.
