

Date: 1 April 2026

To Whom It May Concern,

We are pleased to share that **A Curious Tractor** has been selected to participate in the **Catalysing Impact program**, a national initiative delivered by **Social Impact Hub** in partnership with the **QBE Foundation**.

Catalysing Impact supports purpose-driven enterprises creating meaningful change in the areas of **climate resilience** and **social inclusion**. Through a combination of strategic support, capability building, and access to funding and networks, the program seeks to enable significantly more investment into high-impact enterprises than would otherwise occur.

A key feature of the program is the opportunity for participating enterprises to apply for grant funding of up to \$400,000, with a total pool of \$1 million available. Applications are due September 2026.

Only 10 enterprises have been selected to take part in this opportunity.

Importantly:

- The funding is not automatic or guaranteed.
- It will be awarded through a competitive process based on multiple factors, including the catalytic impact of the potential QBE grant funds to unlock funding from other funders (including yourselves).

We are writing to provide context as you engage with **A Curious Tractor** regarding potential funding. Your engagement - whether through an **Expression of Interest, Letter of Intent, Term Sheet, Funding Agreement or any other Funding Documentation** - may enhance their eligibility for this funding and contribute to unlocking a greater pool of capital for their mission-aligned work. They are requested to share this evidence of investor engagement as part of their application for grant funding.

Thank you for your interest in supporting ventures that are building a more inclusive and resilient future.

Please do not hesitate to contact our Senior Collaboration Manager, Jay Boolkin, should you have any questions or if we can assist in any way. His email address is jay@socialimpacthub.org.

Warm regards,

Adam Long

Director, Funding for Impact, Social Impact Hub, on behalf of the whole Catalysing Impact Team
