

Idiot index: where the cost-down is

Index = what we pay now / raw-material floor. A high bar is not waste; it is supplier margin we could capture by in-sourcing.

THE CAPITAL CASE

HDPE legs = the capital case: in-sourcing the legs captures ~AU\$289/bed of supplier margin

(in-house legs ~AU\$150/bed). Defy panels at 10x are the trap: you pay the press margin and still CNC and assemble.

Source: Goods cost model (2026-05). Index = paid / raw-material floor per component; HDPE-legs margin is modelled on verified BOM inputs.
