

The goal was never a bigger Goods. It is a plant that belongs to the people sleeping on the beds.

Communities choose what they need. We supply proven products and production capability, and then we hand the making over.

YARN → SHAPE → RESOURCE → DELIVER → **TRANSFER** → GROW

NINGA MIA, KALGOORLIE · WHERE IT STARTED

The first bed disappeared overnight.

We built the first Basket Bed with Gloria and her relatives at Ninga Mia, then left it outside the tent on a windy, rainy night. We were nervous. When we came back the bed was gone.

The family had carried it inside. Our field record shows three people on the mattress; the ladies remember all six sharing it. They asked straight away for another double and a single. Later the bed failed, was repaired with rope, and the feedback changed the design.

The first Basket Bed entered the tent as a prototype. It came out as an obligation.

THE DEFAULT

The hardware kept arriving. The question never did.

Remote homes are sold fragile, expensive goods that were designed for a suburb and cannot be repaired locally. One Alice Springs provider's estimate: about **\$3M** of washing machines sold into nearby communities each year, most in a dump within months. Sleeping on the floor is where scabies starts, and scabies is the road toward rheumatic heart disease. That is the **why**. We do not claim the cure.

“Go and talk to the elders first.”

Dianne Stokes, Warumungu Elder, Tennant Creek

So the first stage of every pathway is a **yarn**, and the community sets the agenda. Not a product catalogue.

WHAT THEY CHOSE

The Stretch Bed

STRETCH BED

X-TRESTLE TENSION DESIGN

Three component types. No tools.

WHAT IT IS

A 2 GALVANISED STEEL POLES

B HEAVY-DUTY CANVAS

LONG-EDGE SLEEVES (POLES RUN THROUGH THE LONG SIDES)

STRUCTURAL CANVAS WASHABLE / REPAIRABLE

C RECYCLED-PLASTIC X-TRESTLE LEGS

TOP HOLE (POLE HOLE THROUGH THE TOP OF THE X)

CROSSED PLANKS

SPECKLED RECYCLED HDPE

ASSEMBLY PROCESS

1 LAY OUT THE PARTS (0:00–1:00)

Lay out and sort the three component types.

2 STAND UP THE TWO X-TRESTLE LEGS (1:00–1:45)

BED LENGTH
← APART →

These are the supports.

3 THREAD THE POLES THROUGH THE CANVAS AND LEG HOLES (1:45–3:00)

Each pole passes through a long-edge sleeve and the top holes in the X-legs.

4 TENSION THE ASSEMBLY (3:00–4:15)

The poles through the leg holes hold the tension and pull the canvas taut.

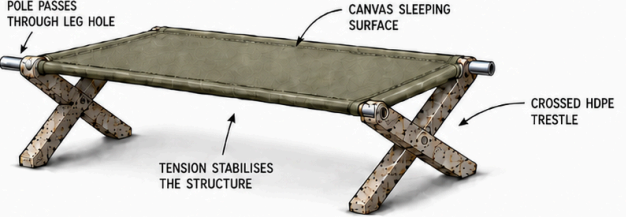

5 DONE — AND LOAD-TESTED (4:15–4:52)

Strong, low, and ready. Tested with real weight.

THE CLEVER BIT

- Tension design: weight pulls poles deeper into the cradles.
- The canvas is structural – it braces the frame.
- The frame won't stand properly without the canvas.
- No screws, no tools: thread poles through leg holes.

POLE PASSES THROUGH LEG HOLE

CANVAS SLEEPING SURFACE

TENSION STABILISES THE STRUCTURE

CROSSED HDPE TRESTLE

IMPORTANT SPEC DETAIL

Real legs are X-frame trestles made from crossed recycled-plastic planks.

26 kg
one person carries it

200 kg
load it holds

~5 min
to build, no tools

\$750
price ● V

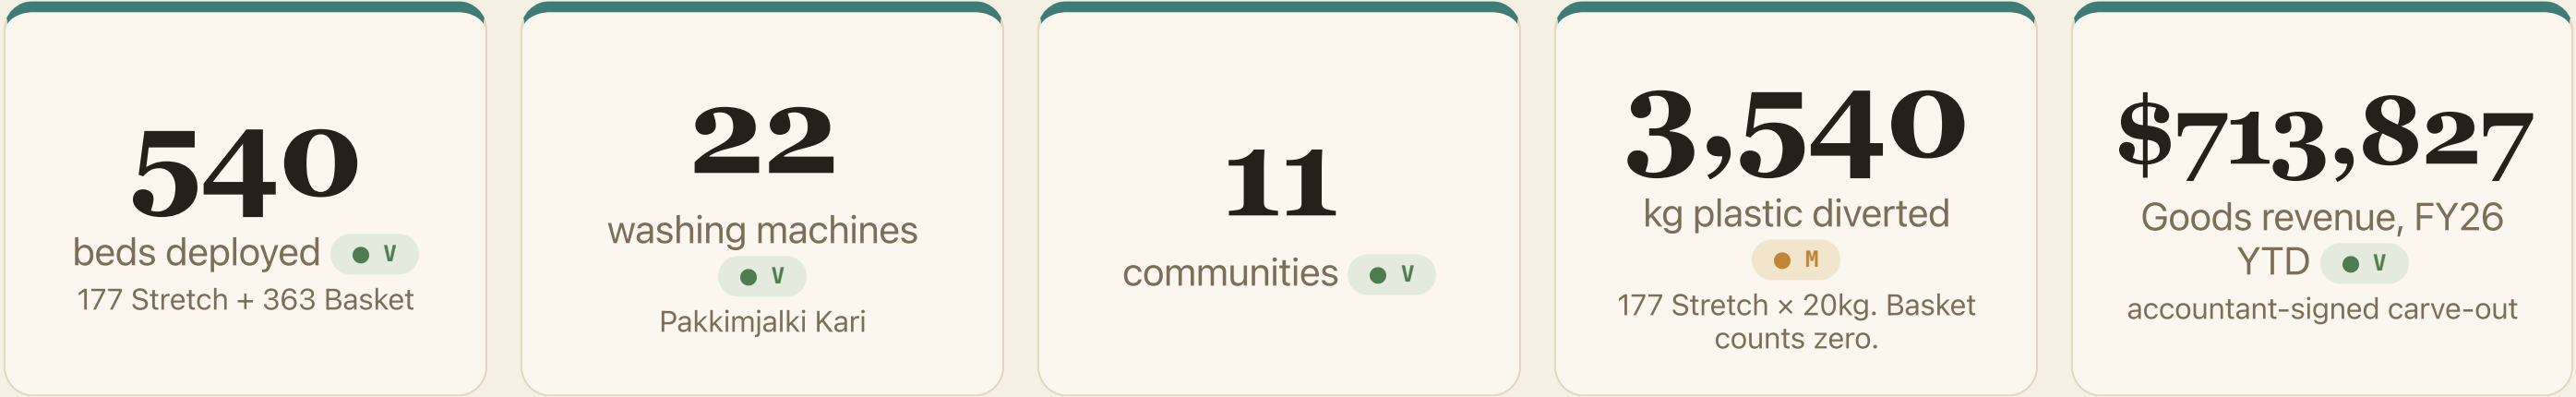

Two crossed recycled-plastic legs, two steel poles, washable canvas. Tension the poles and the canvas braces the frame. Designed in community: the height, the washing, the repair and the transport all came back as feedback and changed it.

“Good for me and comfy, easy to put together.” · Dorrie Jones, Arlparra

Goods.
on Country

PROOF

Already shipped, and every one is trackable.

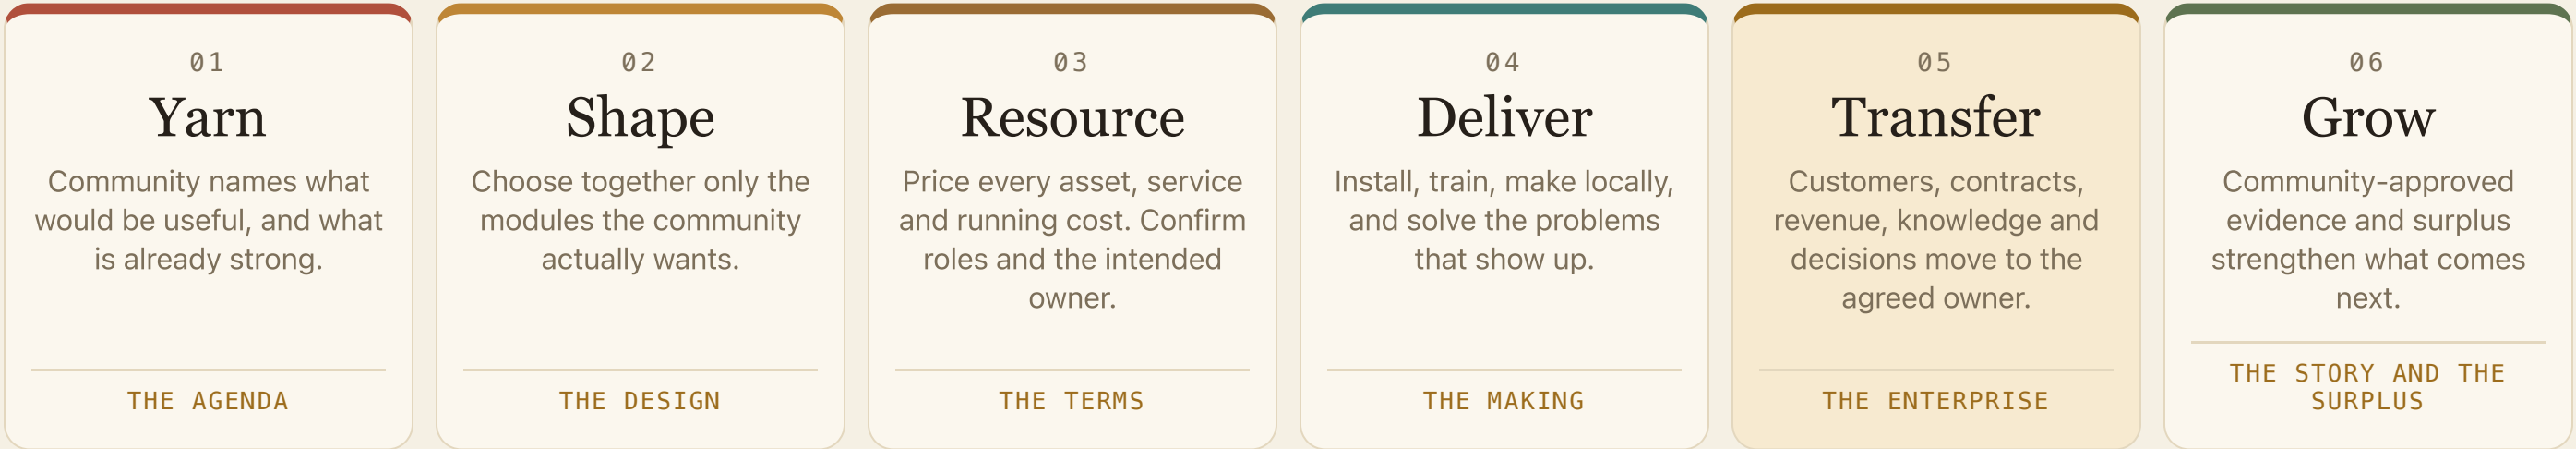

The newest run: 40 Stretch Beds and 2 washing machines to Maningrida Homelands, legs pressed at our own plant, assembled in community, invoiced to Homeland School Company on INV-0303.

Every bed carries a QR digital twin: GPS, recipient, delivery date. Standing behind these figures are **200 to 350 bed requests** we have not filled. “I was trying to ask them if they can make one for me.” · Annie Morrison, Tennant Creek

THE MODEL · COMMUNITIES CHOOSE WHAT THEY NEED

Not a product company with a distribution problem. A menu a community picks from.

SIX STAGES · AND WHAT THE COMMUNITY HOLDS AT THE END OF EACH

NINE MODULES · TAKE ONLY WHAT YOU WANT

Communities can begin anywhere, move at their own pace, and choose how much support they want. Not every community needs the whole system. Every pathway begins with what is already strong.

FOUR LIVE PATHWAYS · FOUR DIFFERENT SHAPES

The same menu. Four communities, four different orders.

URAPUNTJA (UTOPIA) · NT · STAGE 02 SHAPE

A focused equipment pathway

Equipment Skills People

147 beds delivered. Young people already joined the May 2026 build. A shredder has been requested.

Next decision: confirm the operator, the material supply and how much support they want.

TENNANT CREEK · NT · STAGE 01 YARN

Build through the shed that exists

Place Products Skills

Our Community Shed, the Barkly Youth Centre connection, 160 beds and 9 washers already in town.

Next decision: the first pathway yarn, and name the smallest useful test.

OONCHIUMPA (MPARNTWE / ALICE SPRINGS) · STAGE 03 RESOURCE

The complete production and enterprise pathway

Place Equipment Skills People Enterprise Money

Young people already making Stretch Beds. Facility and operating model developed. REAL Innovation Fund at Stage Two: ~\$2M over 3 years, 16 to 20 near-full-time youth roles. **Applied, not secured.**

Next decision: confirm funding, then move into facility implementation.

PALM ISLAND (BWGCOLMAN) · QLD · STAGE 01 YARN

Begin with governance and listening

Story + evidence

131 beds deployed. Council entry point, a local shed connection, and PICC has signalled intent to buy the production plant.

Next decision: start with Council and listen before proposing any infrastructure.

These are **interest and requests**, not signed agreements, and we say so.

DELIVER · AND TRANSFER BEGINS

The making is the first thing we hand over.

\$130

fair wage per bed, already inside the community cost path ● M

Assembly is already happening on Country. It is the first module that moves, before any press does.

A production role runs at about **\$100 a day**, next to more than **\$3,600 a day** for youth detention. ● V

Productivity Commission, Report on Government Services, early 2026

“Yeah, I’ll be rocking up every day to make them.” · Mykel, Oonchiumpa, Alice Springs

Pressing on Country is the whole argument.

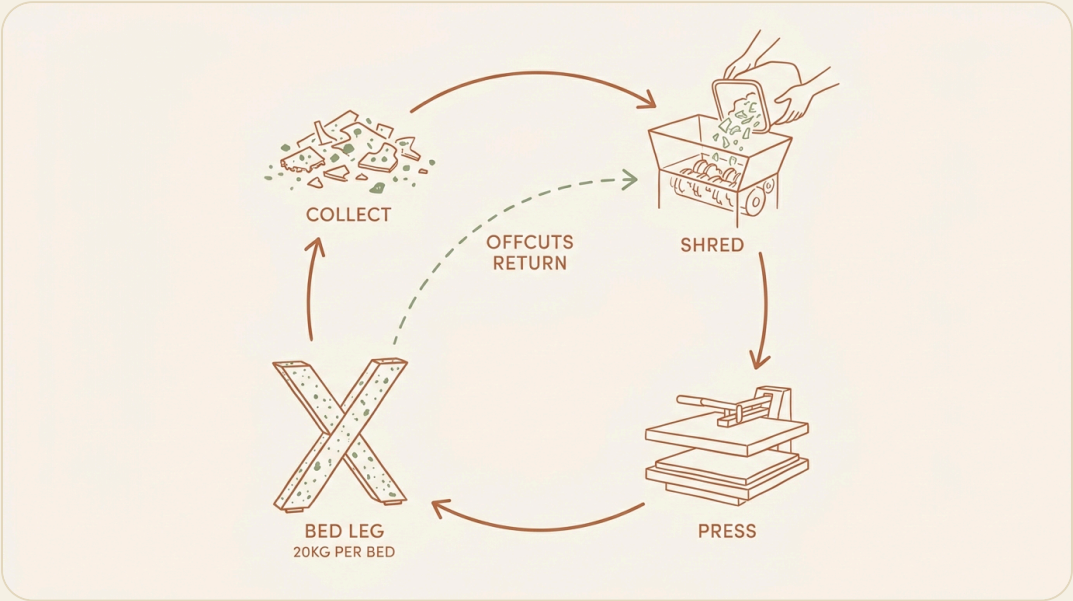

\$65

stays in community today
legs bought finished

\$324

when pressing happens on Country
of the same \$750 bed ● M

\$109,500 / yr

the block: what it costs to run Goods before a single bed is made ● V

338 beds

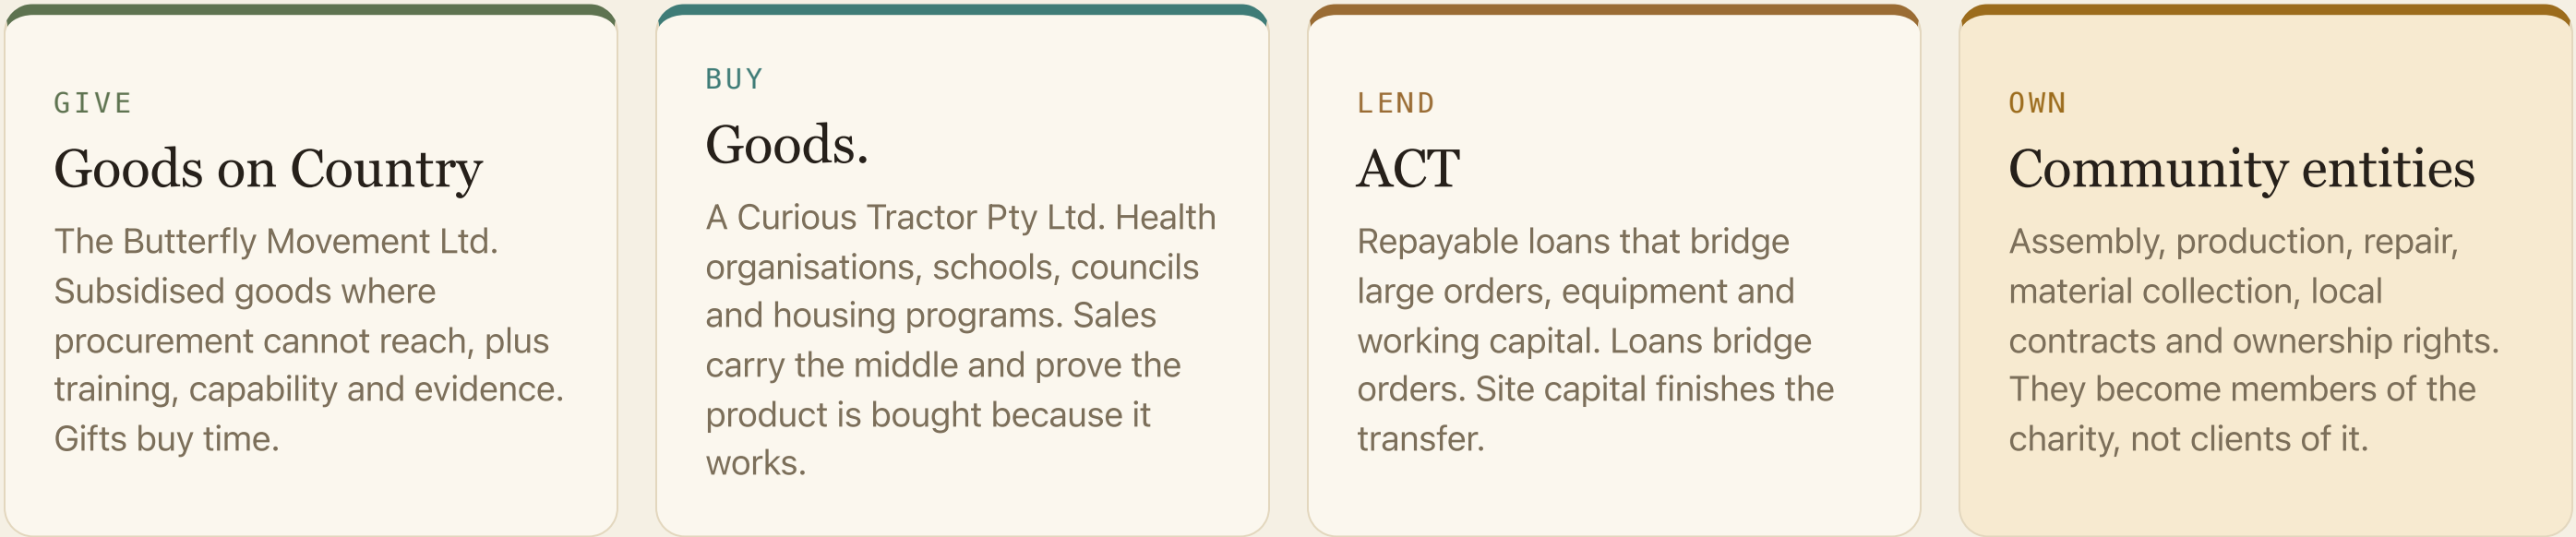

break-even once pressing is ours: the block divided by what stays ● M

75 to 100

beds a year, and a community-owned site stands on its own ● M

Say the honest thing: the \$324 is modelled from verified part prices, not yet measured at production rate. The first thing your money buys is the measured run that proves it.

Three doors. All three end in the same place.

Each stage has its money: gifts buy time, loans bridge orders, sales carry the middle, site capital finishes it.

Equity is not sold. Gifts never fund the company. The inter-entity agreement is being formalised, with completion in progress. Aboriginal-led governance is the direction of travel, with the AGM targeted for around 14 September.

THE ASK

AU\$400,000 in signed commitments by 31 August. QBE matches it dollar for dollar.

An **\$800,000** program that takes Goods to the point it funds itself, and stands up the first on-Country production sites. QBE Catalysing Impact submission **14 September 2026**, outcomes November.

WHAT IT BUYS

The measured run
turns \$324 from modelled into measured

Plant capital
~\$100K to \$150K per site, when a community is ready

First on-Country operator roles
wages, training, mentoring

Working capital and reserve
inventory, freight, finance controls

THE STACK WE ARE ASKING TO SIGN

SEFA **\$300K** repayable

Snow Foundation **\$100K** grant

Centrecorp **\$75K** grant

Target stack **\$475K** · signed to date **\$0**

T

Floor is \$150K matched. Above \$400K the match stops, and extra brings the first site forward. REAL sits outside this match as a separate vehicle.

Give to Goods on Country, buy from Goods., lend through A Curious Tractor. All three roads end at the same place: a plant in community hands.

THE CLOSE

We know what we need. Sit down and ask us, make it with us, and leave the making with us.

A Goods synthesis of community direction across eleven communities. Not an individual's quote.

The design principle: nobody funds Goods forever.
