

**DRAFT for founder sign-off.** Management figures, not audited; Goods only. The QBE match is a program term, contingent and being confirmed in writing. Entity wording is in legal review. Community ownership is the direction we are building toward, not a finalised structure. Not a commitment of capital.

Be our first mover. A matched, recoverable commitment.

It has been three years of Snow backing this, and the partnership now sits inside Snow's own rheumatic-heart-disease strategy. This is the next step in the direction we have been scoping with Bhanvi: moving from grants toward blended, recoverable finance, as Goods becomes a product and a production model that communities can own.

THE ASK

A recoverable anchor of AU\$100,000 that QBE matches at least one to one

Goods is in QBE's Catalysing Impact program. QBE matches external capital we raise, at least one to one, toward a recoverable catalytic commitment (program terms: up to AU\$400,000, contingent, not secured until awarded). Repayable finance carries the most weight, so a recoverable dollar from Snow is worth more to us than the same amount as a grant. Structured to convert toward community ownership over time.

| grant or low-interest loan | anchor, not the whole raise | this is the gate | to count toward Sept Stage 2 |

Why Snow, and why now

- ✓ **No funder knows this work better.** About three years backing it, roughly AU\$493,130 over the life of the partnership. The first move belongs with our warmest, longest backer.
- ✓ **QBE matches at least one to one.** So AU\$100,000 of repayable capital can pull in up to AU\$100,000 more, and QBE weights repayable finance above a plain grant.
- ✓ **It is exactly where we have been heading with Bhanvi:** grants toward blended, recoverable finance, as Goods becomes a product and a production model communities can own.
- ✓ **A first committed backer unlocks the rest.** One anchor commitment is what gives the rest of the stack its momentum.

The structure (we will shape it with you and Bhanvi)

- A recoverable grant or a low-interest loan, whichever fits Snow's impact-investment approach.
- Sized as an anchor, not the whole raise. The exact figure is a conversation, not a number we are imposing.
- Structured to convert toward community ownership over time, which is the point: community ownership of the production over time. This is the direction we are building toward, not a finalised legal structure (the entity work concludes ~end July 2026).

The investment case, in one ladder

Cost-model v6, computed 27 June 2026 (modelled). Capital moves Goods from buying kits to in-sourcing, and builds a production asset communities can own.

IN ONE LINE  
A recoverable dollar from Snow, matched by QBE, builds toward the day communities own the production.

What's next

Everything is on the partner dashboard ([goodsoncountry.com/partners/snow/dashboard](https://goodsoncountry.com/partners/snow/dashboard), password snow2026), and I can send the full investor pack and jump on a call whenever suits. The match needs to be committed by late August to count toward our September Stage 2 application. Even if the exact size or structure needs work, I would genuinely value your read on the recoverable structure, and any introductions you would make to other repayable or catalytic lenders.

**Provenance.** Verified (canon): 496 beds, 9 communities, AU\$750 price, specs ([asset-canonical.ts](#), [products.ts](#)). Cost-model v6 (computed 27 June 2026, [engine.ts](#)): ~\$685 buy-kit, ~\$426 in-source, ~\$260 saved per bed. Management, not audited: AU\$713,827 Goods only. Snow lifetime ~AU\$493,130 (Snow thread). QBE program terms: up to AU\$400,000, at least one to one, repayable preferred, contingent and not secured until awarded; confirm the exact rules with the Social Impact Hub in writing before relying on them. No clinical or health-outcome claims: the rheumatic-heart-disease line names Snow's strategy, not a Goods-claimed result. Community ownership is intent, pending the entity review (~end July). Anchor set at AU\$100,000, the lead-stack figure; framed as an anchor, not the whole raise.
